(54) Title: INPUT DEVICE FOR TOUCH SCREEN

(57) ~~Abstract~~—The present invention relates to a movement input device for use on a touch screen (14) and a portable electronic device including such a device, where the movement input device comprises a fastening unit (16) securing the movement input device on the portable electronic device, and a user input unit (18) stretching through the fastening unit. The user input unit comprises a user actuation part (26) protruding from a top side of the fastening unit and actuable by a user for free angular movement around an axis (X) and a touch screen contact part (28) protruding from a bottom side of the fastening unit, which is arranged to contact the touch screen in a position where at least an angle of the contact position corresponds to an angle of the user actuation part. Movement of the user input unit is thus detected on the touch screen.
